

Demo Day

Student projects, shown with evidence

Agent, exchange and tooling projects, shown with tests and devnet evidence.

Hosted by Travis Sim

NUS · Singapore

Thu 18 Feb 2027 · COM3/COM4

Ten weeks, three lanes

Tonight every project shows evidence, not just a pitch.

AGENT

A trading agent or strategy with honest validation.

LANE 1 OF 3

EXCHANGE

A venue part: order book, matching, deposit or custody flow.

LANE 2 OF 3

TOOLING

Data collection, backtesting, monitors, risk guards, dashboards.

LANE 3 OF 3

Tonight

18:00 to 20:00. Most of it is you showing and trying work.

18:00 — 10 min
Doors
check-in, gallery open

18:10 — 10 min
Welcome
the format and how projects are judged

18:20 — 35 min
Demos
3 minutes, then 2 for questions

18:55 — 15 min
Peer gallery
try demos, leave one question

19:10 — 10 min
Feedback
feedback and next steps

19:20 — 25 min
Community build
reproduce, file an issue, plan

19:45 — 15 min
Retrospective
what changed, what continues

Demo: project gallery

PREDICT FIRST

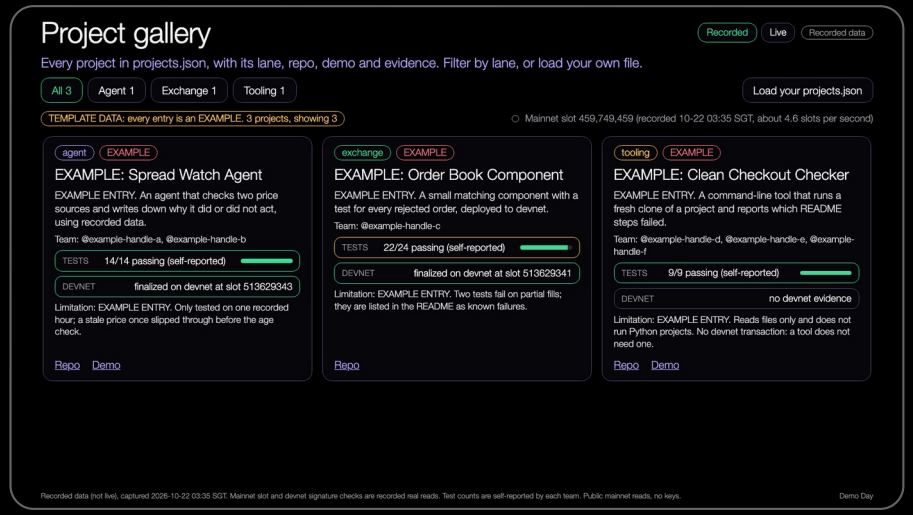

Which project would you open first, and what evidence would you look for?

```
$ npm run demo -- --recorded
```

YOU SHOULD SEE

- one card per project, with its lane
- tests and devnet evidence on each card

Fallback: Recorded data is the default. No network needed.

Demo Day demo, runs from disk, recorded data.

Try it: https://nus-solana-demos.vercel.app/0010/01-project-gallery.html

Live mode: switch it on to watch real Solana data.

Source: demo-repo/lab/screenshots (captured from the Demo Day demos on recorded data; the three projects are EXAMPLE entries)

Rules of the room

Four rules, so every project gets a fair five minutes.

1 Devnet only

Everything shown runs on devnet or recorded data. No real funds, no seed phrases on screen.

2 The timer decides

Three minutes to demo, two for questions. When it ends we thank the presenter and move on.

3 Ask for evidence

Good questions start with: which command, which test, where can I see it.

4 Photos by choice

Photo and recording choices are made at the door. Nobody is filmed without saying yes.

Three minutes, then two

Seven slots, 18:20 to 18:55, back to back.

DEMO · 3 minutes

QUESTIONS · 2 minutes

0:00

Demo starts

the first sentence says what it does

2:30

30 seconds left

a signal from the host, no surprise

3:00

Demo ends

questions start

5:00

Slot ends

the next presenter is already at the laptop

Have the recorded backup open in another tab before you start.

What three minutes holds

An evidence-based story: problem, failed attempt, useful change, test, limitation.

1	2	3	4	5
30 s	30 s	60 s	40 s	20 s
Problem	Failed attempt	Useful change	Test	Limitation
What hurt, in one sentence.	What did not work, shown or told.	What you changed and what it does now.	The command, and its result.	What is still weak.

A clear negative result is valuable. Say it.

PLACEHOLDER: leads fill this on the day

Order of presenters

Filled in by the leads on the day, from the final project list.

SLOT 1

18:20 to 18:25

Project and team to be added

SLOT 2

18:25 to 18:30

Project and team to be added

SLOT 3

18:30 to 18:35

Project and team to be added

SLOT 4

18:35 to 18:40

Project and team to be added

SLOT 5

18:40 to 18:45

Project and team to be added

SLOT 6

18:45 to 18:50

Project and team to be added

SLOT 7

18:50 to 18:55

Project and team to be added

Seven slots of 3 + 2 minutes. More than seven projects: the rest go to a lightning slot or the peer gallery.

`Run-of-show timer: https://nus-solana-demos.vercel.app/0010/03-run-of-show-timer.html`

Live mode: switch it on to watch real Solana data.

Source: demo-repo/code/out/schedule.json (18:20 to 18:55, 3 + 2 minutes per slot). No project names: filled in by the leads.

How projects are judged

Five criteria, 100 points, published before tonight.

30 points

Utility

Would someone else use this, or learn from it?

25 points

Reproducible tests

Can a stranger run the tests from a clean clone and get the same result?

25 points

Devnet evidence

Is there a devnet transaction or program anyone can check?

10 points

Clear explanation

Problem, failed attempt, useful change, test, limitation: was the story clear?

10 points

Sustained contribution

Did the work grow over the semester, with commits from the whole team?

Weights add up to 100. Utility, tests and devnet evidence carry 80.

Never scored: simulated returns, profit claims, backtest return charts.

Source: demo-repo/code/out/rubric.json. Weights are a proposal for the leads to confirm.

Devnet evidence you can check

A signature on a slide is a claim. A signature devnet confirms is evidence.

1 Show it

The transaction signature, in the README or on screen.

2 We ask devnet

A read-only check. Nothing is sent.

3 Read the answer

Status and slot, or not found.

SAMPLE CHECK (REAL, 22 OCT 2026, NOT A STUDENT TRANSACTION)

```
signature  2eGnTvKi...krTXY6
status     finalized
devnet slot 513,629,343
read only: getSignatureStatuses
```

HEADS UP

Devnet keeps recent history, so freeze a transaction you can still show on the day.

Source: demo-repo/code/recorded/signature-checks.json (devnet getSignatureStatuses, captured 22 Oct 2026 03:35 SGT).

Demo: judging scorecard

PREDICT FIRST

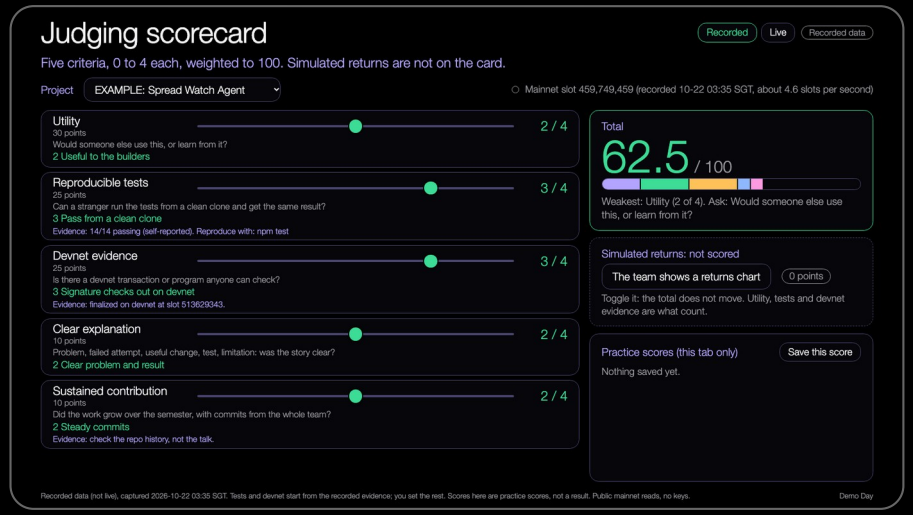

Which criterion will cost most teams the most points?

```
$ npm run demo -- --recorded
```

YOU SHOULD SEE

- five sliders, weighted to 100
- a returns chart that adds zero points

Fallback: Same recorded data. The scores are practice scores.

Demo Day demo, runs from disk, recorded data.

`Try it: https://nus-solana-demos.vercel.app/0010/02-judging-scorecard.html`

Live mode: switch it on to watch real Solana data.

Source: demo-repo/lab/screenshots (captured from the Demo Day demos on recorded data; the three projects are EXAMPLE entries)

Peer gallery

18:55 to 19:10. Try a demo and leave one question.

1 **Open**
A project from the gallery that is not yours.

2 **Try**
Follow its README, run its demo or its tests.

3 **Ask**
Leave one question that evidence can answer.

QUESTIONS THAT EVIDENCE CAN ANSWER

Which command did you run, and what did you see?

Where is the test for the failure case?

Can I check that transaction on devnet?

Everyone should reproduce at least one thing before 19:10.

What happens next

19:10 to 20:00. Voluntary, and yours to shape.

19:10

Feedback and next steps

Tell us what you would use or contribute to, and what to test first.

19:20

Community build time

Reproduce a demo, open an issue, or agree a small next experiment.

19:45

Retrospective

What changed after a failed attempt, and who wants to keep building.

Demo: ship-readiness check

PREDICT FIRST

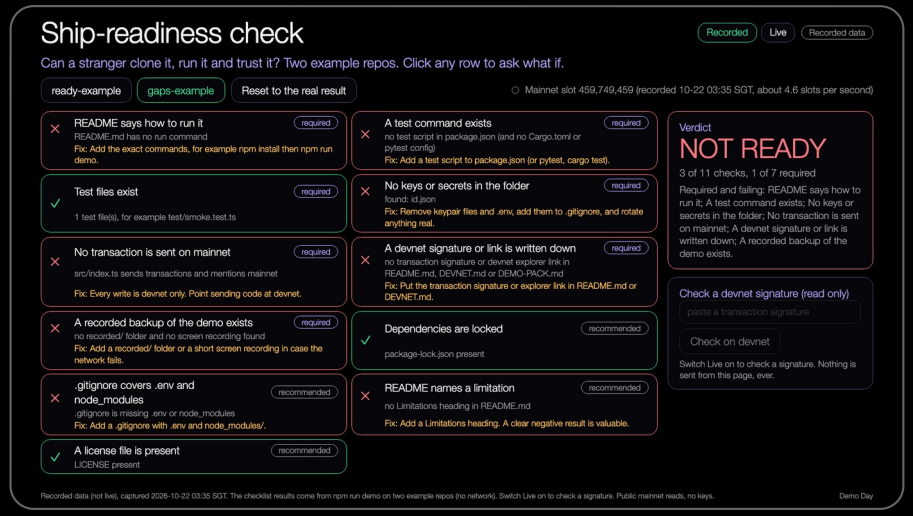

Which required check do most repos fail first?

```
$ npm run ship -- --dir ../my-project
```

YOU SHOULD SEE

- eleven checks, seven required
- a clear fix for every failure

Fallback: Recorded results for two example repos. No network needed.

Demo Day demo, runs from disk, recorded data.

Try it: https://nus-solana-demos.vercel.app/0010/04-ship-readiness.html

Live mode: switch it on to watch real Solana data.

Source: demo-repo/lab/screenshots (captured from the Demo Day demos on recorded data; the three projects are EXAMPLE entries)

Try the demos yourself

DEMOS

`nus-solana-demos.vercel.app/0010/`

Open the gallery and the scorecard on your laptop.

No install. The same files are in the repo and open from disk.

Scan to open the demos

Source: demo-repo/lab (the four Demo Day demos, deployed as static pages, recorded data by default)

Branch out

After tonight, in your own time.

BEGINNER

Run a peer's project from its README and write down every step that failed.

STANDARD

Open an issue on that repo with the command, the output and what you expected.

ADVANCED

Add a test or a fix for it, or run the ship-readiness check on your own repo and close every required gap.

Share back

Before you leave, and this week.

TONIGHT

1

Leave one evidence-based question for a peer.

THIS WEEK

2

Send your repo link and demo pack to the leads.

ANY TIME

3

Keep the repo public, and tell the group when you ship a fix.

Get the code

REPO

`github.com/travisim/solana-agentic-trading-nus`

`folder: 0010-demo-day/demo`

```
1  $ npm install
```

```
2  $ npm run demo -- --recorded
```

Run both from the demo/code folder. Node 24. No keys, no AI credits. Recorded data is bundled.

Scan for this session's code
